reaperJsonToWwise (Create Montage Notes In Wwise)

解析reaper导出含有事件名、时间戳、蒙太奇等属性的Json,并将这些信息导入对应event的notes中供UE提取

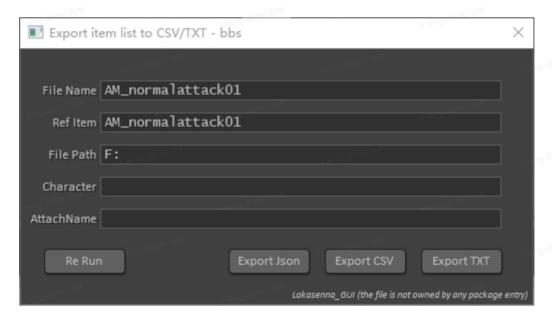

1、下载优化过的lua脚本: Giant_Export_ItemList,并在reaper中load Reascript

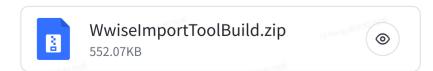

2、规范reaper工程

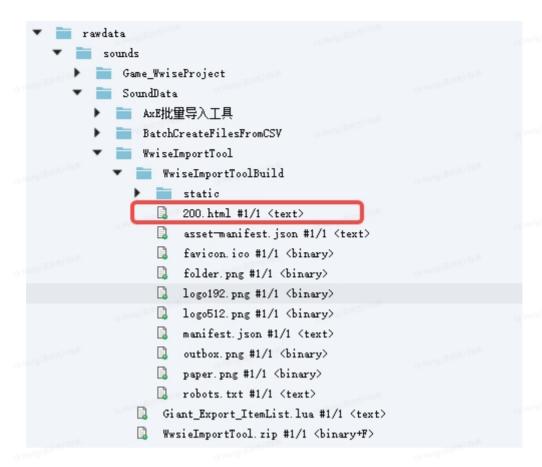

3、全选音轨、视频轨 — Run lua脚本: Giant_Export_ItemList —填写Character、 AttachName(不填默认WeaponSocket) — export Json

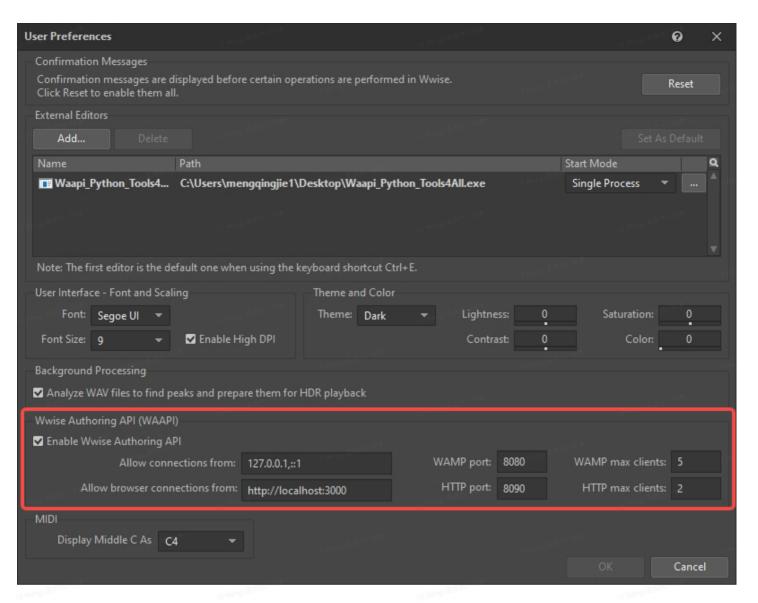

4、打开Wwise,用浏览器打开工具文件夹中的200.html(WwsieImportToolbuild\200html)

5、如图配置Wwise。完毕后刷新工具页面,检查工具顶端是否显示"Connected to Wwise vxxxx.x.x",**这是判断工具和Wwise是否正常连接的依据**。

5、导入上一步Reaper生成的Json,点击"reaperJSON2Wwise"按钮即可。

结果:可以在Wwise中对应的Event查看相应的notes信息已经写入。
